

## **PROJECT INFORMATION SHEET**

### **CITY OF NORTON WADSWORTH ROAD WATERLINE – PHASE 1**

The City of Norton is under construction of the Wadsworth Road Waterline – Phase 1 project. The new waterline will provide fire protection and potable drinking water directly to approximately 127 households/businesses. Additionally, the waterline and tank will benefit portions of the existing water system by providing water storage and improved water supply pressure. See the project location map for construction areas.

Project Components: The project includes the construction of approximately 12,743 feet of 16" PVC watermain, 1,301 Feet of 8" PVC watermain (including associated fire hydrants and water services to each occupied structure), and a 750,000 gallon elevated water tank.

Construction Cost: \$7,267,532.00

Restoration: Videos of all potentially impacted areas were taken prior to construction beginning to document the preconstruction condition. The contractor is responsible for restoring all areas impacted by construction to their preconstruction condition.

Construction Schedule: Watermain construction is expected to be completed by March 2025. However, the watermain construction will occur in different locations and at different times. The contractor will install and test the watermains and perform restoration. Then, the contractor will return to install water services and perform additional restoration. Traffic impacts/delays are expected but road closures are not expected.

Tank construction is expected to be completed by July 2025.

Water Service Connections: After the watermain is installed and tested, the City's contractor will return to install water services to the road right of way for all properties with an occupied structure. Property owners can direct the contractor where to install the water service along their property frontage. After the City gives notice to property owners that the watermain and water service construction is complete, property owners will have the option to connect to their water service. If property owners want to connect to the water service, the property owner will need to pay the associated connection fees and install a water service from the structure to the water curb stop at the road right of way.
